

1.Specimen cups

★ Features

- With good sealing performance and effectively prevents the specimen leakage and pollution, the main material: PP or PS, without reaction with weak acid or weak base.
- PP material: with better toughness , translucent, high temperature resistant -121 °C, no deformation under high pressure.
- PS material: hard, with high transparency, available to observe the specimen color directly.
- Good sealing performance ensures pre-analysis quality control and ensures sample inspection standardization.
